LOW-FIDELITY WIREFRAMES · DRAFT FOR CLIENT REVIEW

Engineering Project CRM & Tracker

These wireframes show the proposed layout of every main screen before any visual design or development starts. They are intentionally grey and plain so the discussion stays on **what is on each screen, where it sits, and how people move between screens**.

Colours, fonts, logo and final wording come in the next stage (polished mockups and a clickable prototype), after we agree on these layouts.

Document	**Wireframes, stage 1 of 2**
Version	**0.1 draft**
Date	**19 October 2026**
Screens	**7 desktop (1440 × 900) · 6 mobile (390 × 844)**
Sample data	**All projects, clients and people shown are fictional demo records**
Next step	**Your feedback on layout and the points to confirm at the end**

---

1 Numbered marker, explained in the notes beside each screen

In Progress · ✓ Completed — Status badges use shape and fill; final colours come later

! Overdue · **• Due today** — Deadline warnings

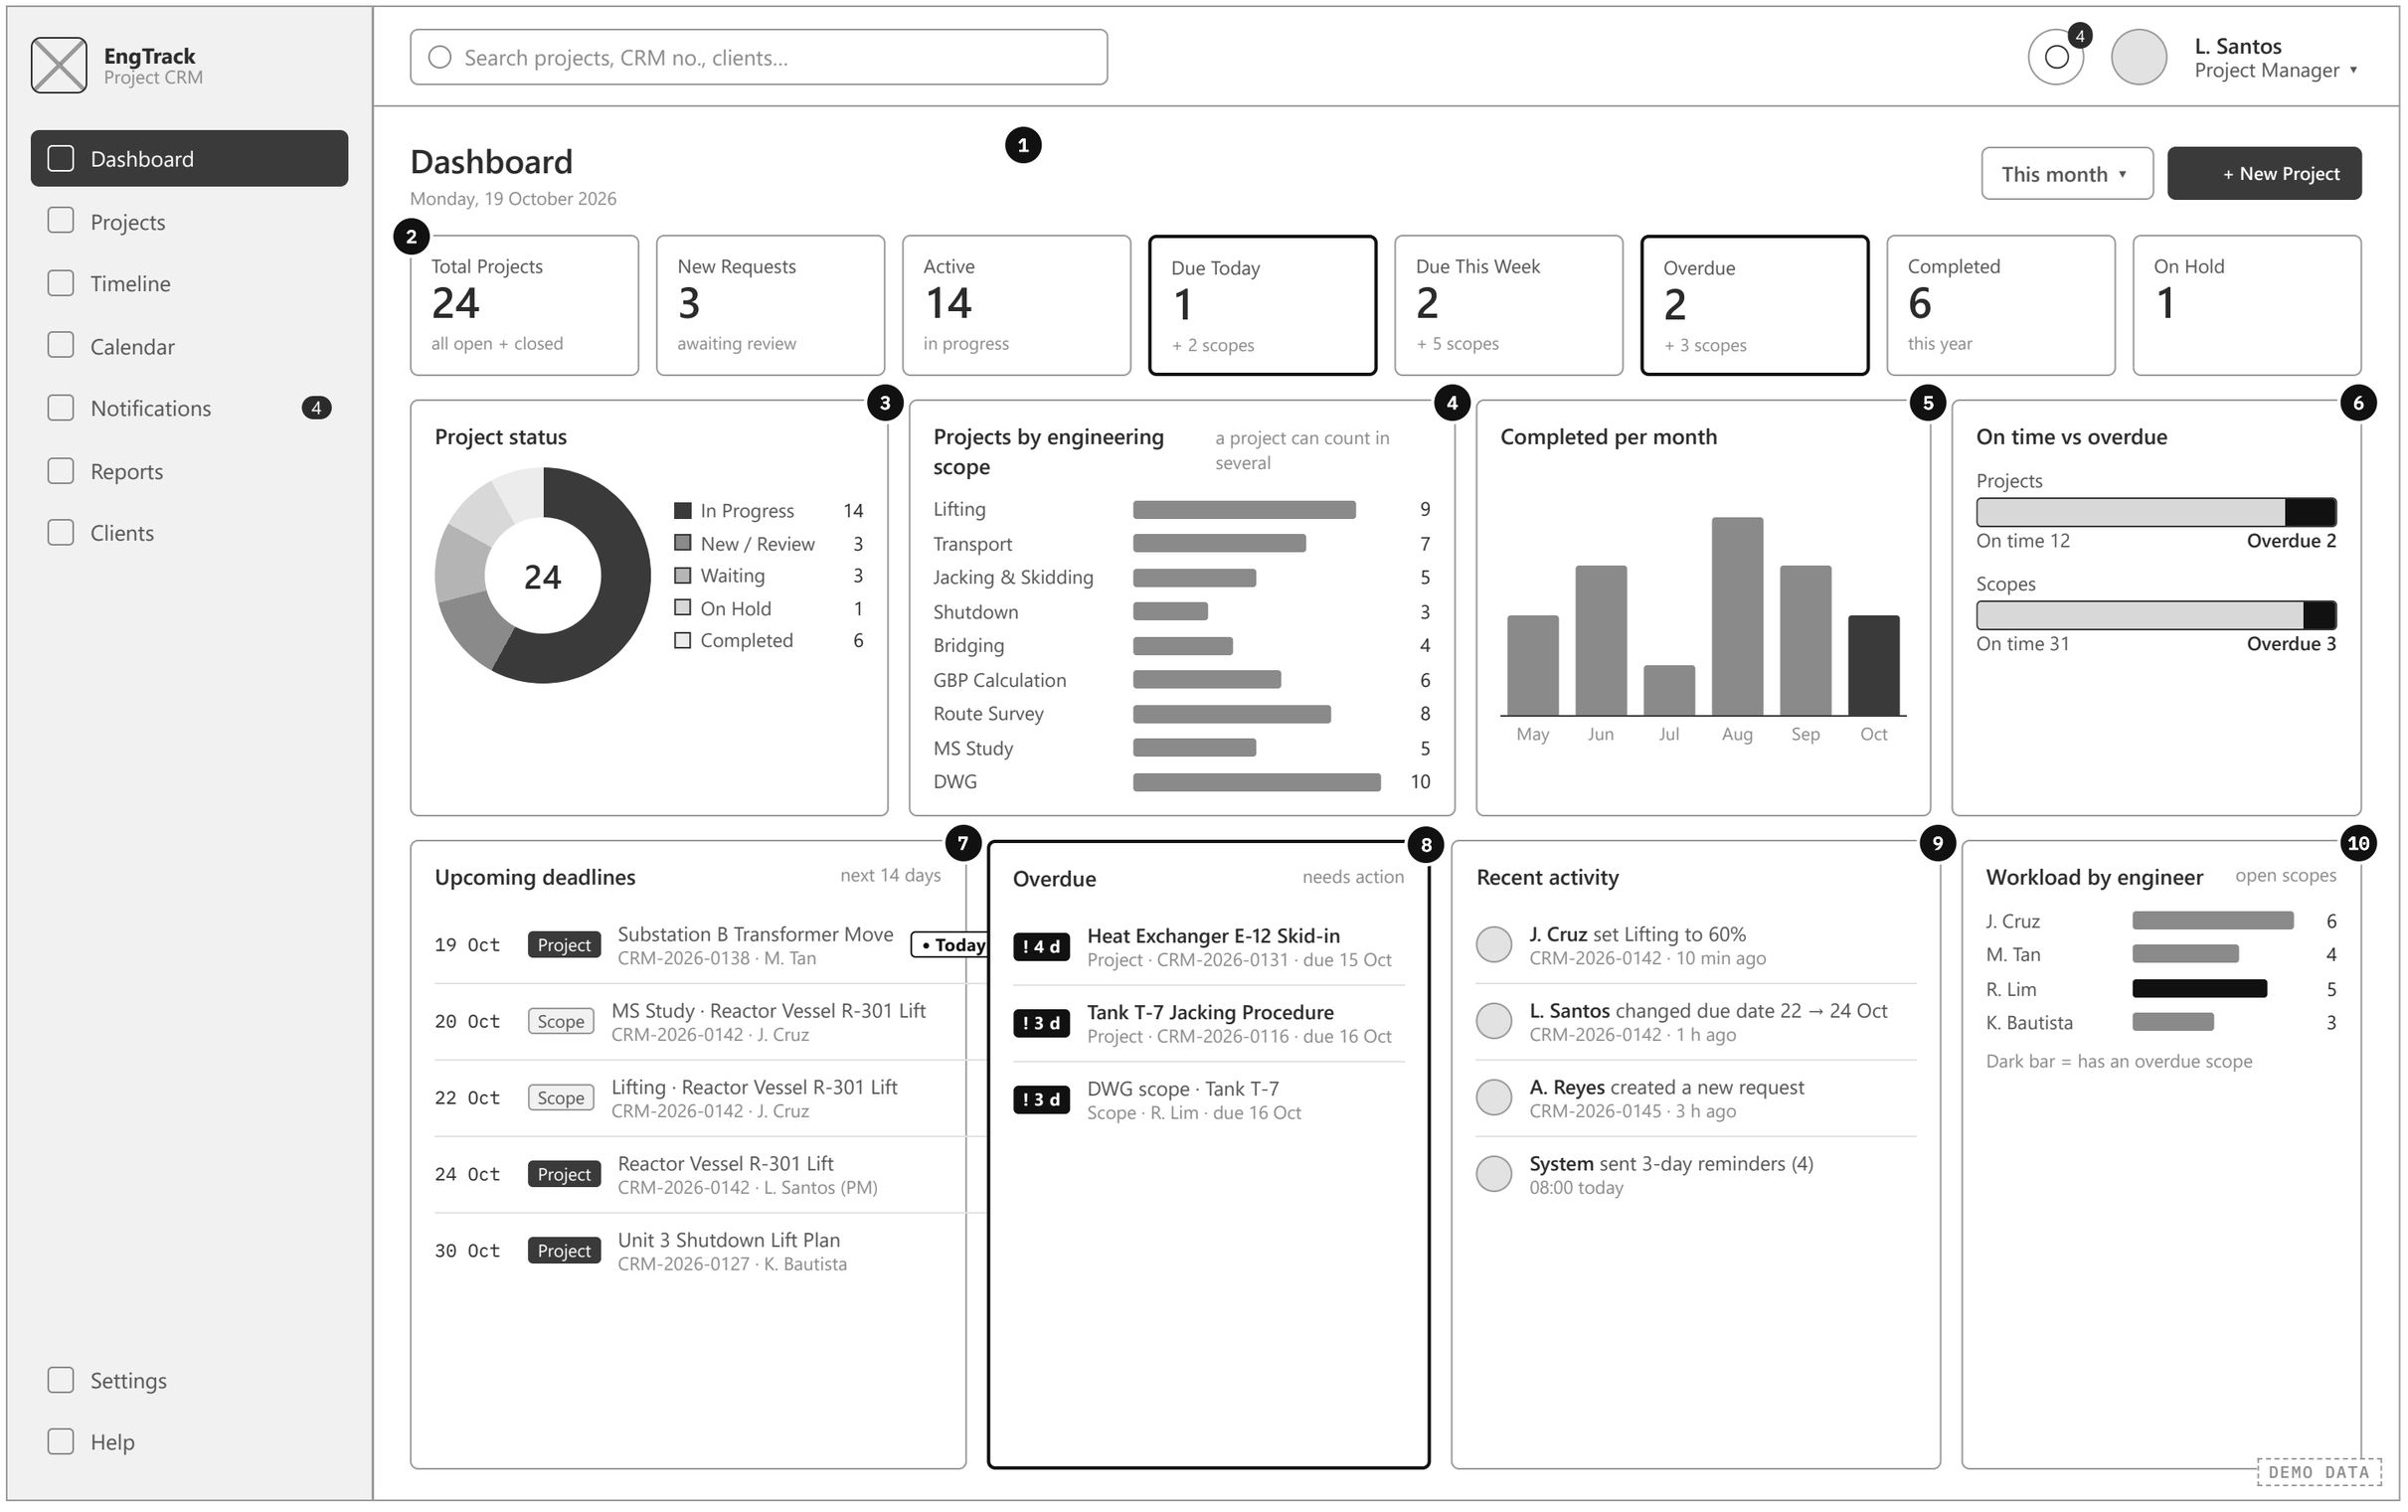

Project · Scope — Project deadline vs individual scope deadline

Desktop screens

Designed for a 1440 × 900 office monitor. The left menu and top bar stay the same on every screen.

D1 Dashboard

The home page. Shows the health of all work at a glance. Every number and chart is calculated from live project records, and clicking any card or chart bar opens the matching filtered project list.

1. **Search** by project number, name or client from any screen. The bell shows unread deadline alerts.
2. **Summary cards.** Each card opens the project list already filtered. Cards also count individual scopes that are due or overdue.
3. **Status distribution** across all projects.
4. **Projects by scope** for all nine engineering scopes. One project can appear under several scopes.

5. **Monthly completions** for the last six months.
6. **On time vs overdue**, shown separately for projects and scopes.
7. **Upcoming deadlines.** The tag shows whether the date is the whole project's deadline or one scope's deadline.
8. **Overdue list** is always visible and sorted by days late.
9. **Recent activity**: who changed what, and when.
10. **Workload** per engineer, so managers can spot overloaded people before assigning more work.

D2 **Project Tracker** The full list of projects, replacing the manual tracking sheet. Search, filter and sort to find any project, then open it for details.

‹ Prev 1 2 3 Next › Rows per page: 25

DEMO DATA

1 **Search and filters** for status, scope, client, salesperson, engineer, priority and due date, plus quick toggles for overdue-only and completed projects.

2 **Sortable columns**: click a header to sort by due date, project name, priority or status.

3 **Scope summary.** Projects with several scopes show the first scope and “+3”. All scopes are listed on the project page. A black bar on the left marks overdue rows.

4 **Pagination** keeps large lists fast.

5 **Export** the current filtered list to CSV, Excel or PDF.

6 **Add Project** opens the create form (D4). The ··· menu on each row offers Edit, Duplicate and Archive.

D3 Project Details

Everything about one project on one page. This example has four engineering scopes, each with its own engineer, deadline, status and progress.

Contact	E. Navarro · 0917 000 0142
Salesperson	**A. Reyes**
Project manager	**L. Santos**
Engineers	J. Cruz, M. Tan, K. Bautista
Requested	28 Sep 2026
Start	01 Oct 2026
Due	**24 Oct 2026**
Planned finish	23 Oct 2026
Created	A. Reyes · 28 Sep
Last updated	J. Cruz · 10 min ago

Description

4 **Engineering scopes** + Add scope

Scope	Engineer	Start	Due	Status	Progress	Depends on
Route Survey	M. Tan	01 Oct	09 Oct	✓ Completed	100%	—
Lifting	J. Cruz	12 Oct	22 Oct	In Progress	60%	Route Survey
MS Study	J. Cruz	12 Oct	20 Oct	In Progress	50%	—
DWG	K. Bautista	15 Oct	24 Oct	In Progress	20%	Lifting

5 **Timeline** 01 Oct – 26 Oct

6 **Tasks & milestones** | Notes (3) | Attachments (5) | Activity history

- ☑ Confirm crane capacity chart — Lifting · J. Cruz · done 14 Oct
- ☐ **Ground bearing check with GBP data** — Lifting · J. Cruz · due 21 Oct — In Progress
- ☐ **Draft method statement** — MS Study · J. Cruz · due 20 Oct — Not started

- ◆ Request received — 28 Sep · done
- ◆ Scope confirmation — 02 Oct · done
- ◇ **Client approval** — 23 Oct · planned

DEMO DATA

1. **Header** with project number, name, status and priority. Actions: Edit, Duplicate, Archive, Print summary.
2. **Overall progress** is calculated from the scopes. See point Q2 at the end.
3. **People and dates**: client contact, salesperson, project manager, engineers, requested, start, due and planned finish. Shows who created and last updated the record.
4. **Engineering scopes** each have their own engineer, dates, status, progress and dependency. Scopes can be added or removed here.
5. **Mini timeline** of the scopes. The vertical line is today; the diamond is a milestone.
6. **Tabs** for tasks and milestones, notes, attachments and the full activity history (who changed what and when).

D4 Create / Edit Project

One form in four sections. Picking a scope adds a row where its engineer and due date can be set. Problems are shown next to the field before saving.

Projects › New project

Create project

Cancel | Save project (6)

! 2 fields need attention before this project can be saved.

1 · Project information

Project number *: CRM-2026-0138

! This number is already used by "Substation B Transformer Move".

Project name *: Flare Stack Replacement Lift

Client *: Vista Chemicals

Pick an existing client or + Add new client

Description: Scope of work, site location, special conditions…

2 · Engineering scope

select one or more

- [x] Lifting
- [ ] Transport
- [ ] Jacking & Skidding
- [ ] Shutdown
- [ ] Bridging
- [x] GBP Calculation
- [ ] Route Survey
- [x] MS Study
- [x] DWG

Selected scopes: set engineer and dates for each (5)

Scope	Engineer	Start	Due	Priority
Lifting	R. Lim	02 Nov	16 Nov	High
GBP Calculation	K. Bautista	02 Nov	06 Nov	Normal
MS Study	R. Lim	09 Nov	18 Nov	Normal
DWG	Choose…	—	—	Normal

Scopes may have different engineers and deadlines from each other and from the project.

3 · Scheduling

Requested *: 19 Oct 2026 | Start date: 02 Nov 2026 | Due date *: 28 Oct 2026 | Priority: High

! Due date (28 Oct) is before the start date (02 Nov).

4 · Assignments

Salesperson *: D. Ocampo | Project manager *: L. Santos | Assigned engineer(s): R. Lim, K. Bautista

DEMO DATA

1. **Project information.** The system checks that the project number is not already in use.
2. **Engineering scope**: all nine scope types as tick boxes. More than one can be ticked.
3. **Scheduling** with date pickers. The system catches impossible dates, such as a due date before the start date.
4. **Assignments**: salesperson, project manager and engineers, picked from the user list.
5. **Per-scope details** appear for each ticked scope, so each one can get its own engineer and deadline.
6. **Save / Cancel.** Fields marked * are required. The edit form uses the same layout.

D5 Gantt Chart

All schedules on one timeline. Each project is a bar, with its engineering scopes as rows underneath. Uses the same data as the project tracker.

21 Oct	1-day reminder · Lifting scope (0142)
23 Oct	7-day reminder · Unit 3 Shutdown (0127)
24 Oct	Due-today alert · Reactor Vessel R-301

DEMO DATA

1 **Month or week view**, filterable by engineer and by type of date.

2 **Calendar items** for project deadlines, scope deadlines, milestones and planned finishes. Overdue and completed items look different. Click any item to open its project.

3 **Notification centre.** Black dot = unread. Each alert names the project or scope, who it was sent to, and has an Open link.

4 **Reminder steps**: 7, 3 and 1 day before the due date, on the day, and a separate overdue alert. Sent to the assigned engineer and the project manager.

5 **Upcoming reminders** already scheduled. If a deadline changes, these reschedule automatically. Completed and cancelled work stops getting reminders.

D7 Reports

Ready-made reports with one set of filters and export controls. Exports follow the filters and only include what the user is allowed to see.

DEMO DATA

(1) **Report list**: active, overdue, due in 7 or 30 days, completed by month, by scope, by client, workload, on hold and scope-level delays.

(2) **One filter bar** for every report: date range, status, engineer and scope.

(3) **Export** to CSV, Excel or PDF, or print. Project numbers and dates keep their format in Excel.

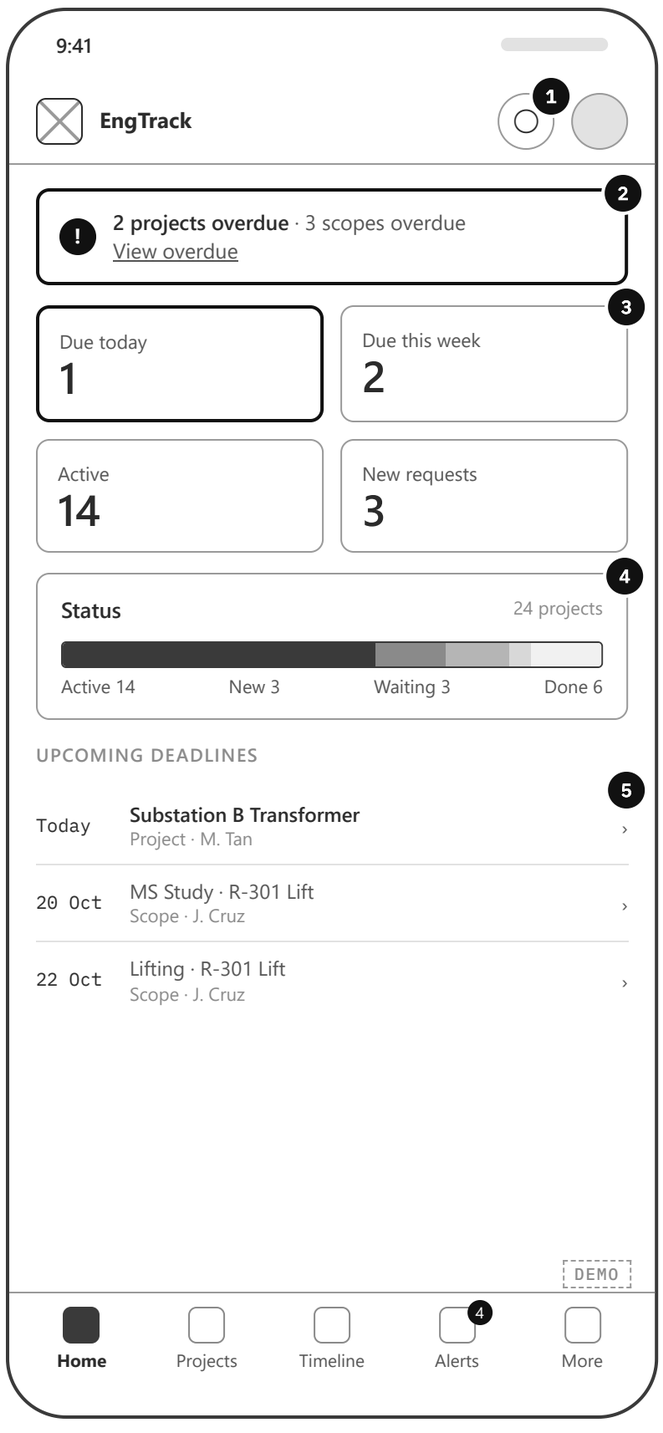

(4) **Charts** for completions, workload and scope mix.

(5) **Detail table** under the charts. This is the exported data.

Mobile screens

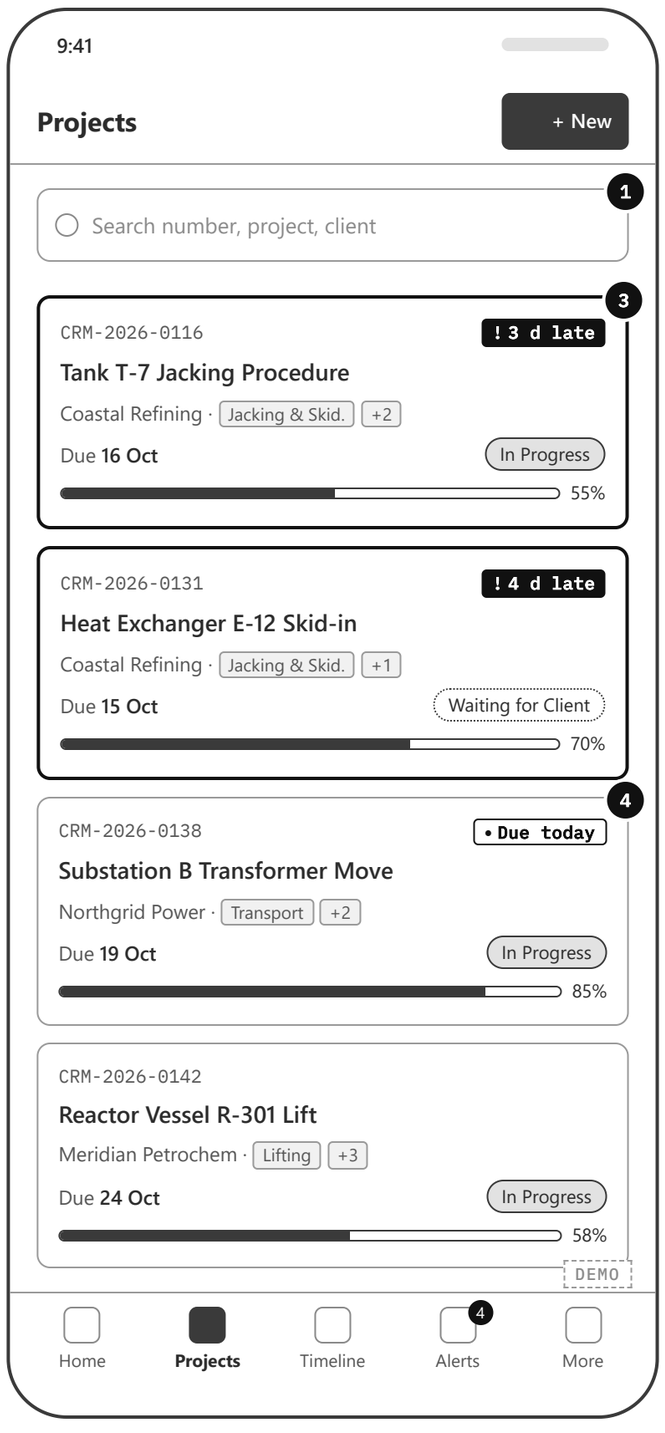

Designed for a 390 × 844 phone. Mobile uses cards and lists instead of a shrunken desktop table, with large touch targets and a bottom menu. Engineers can update progress from site.

M1 Dashboard

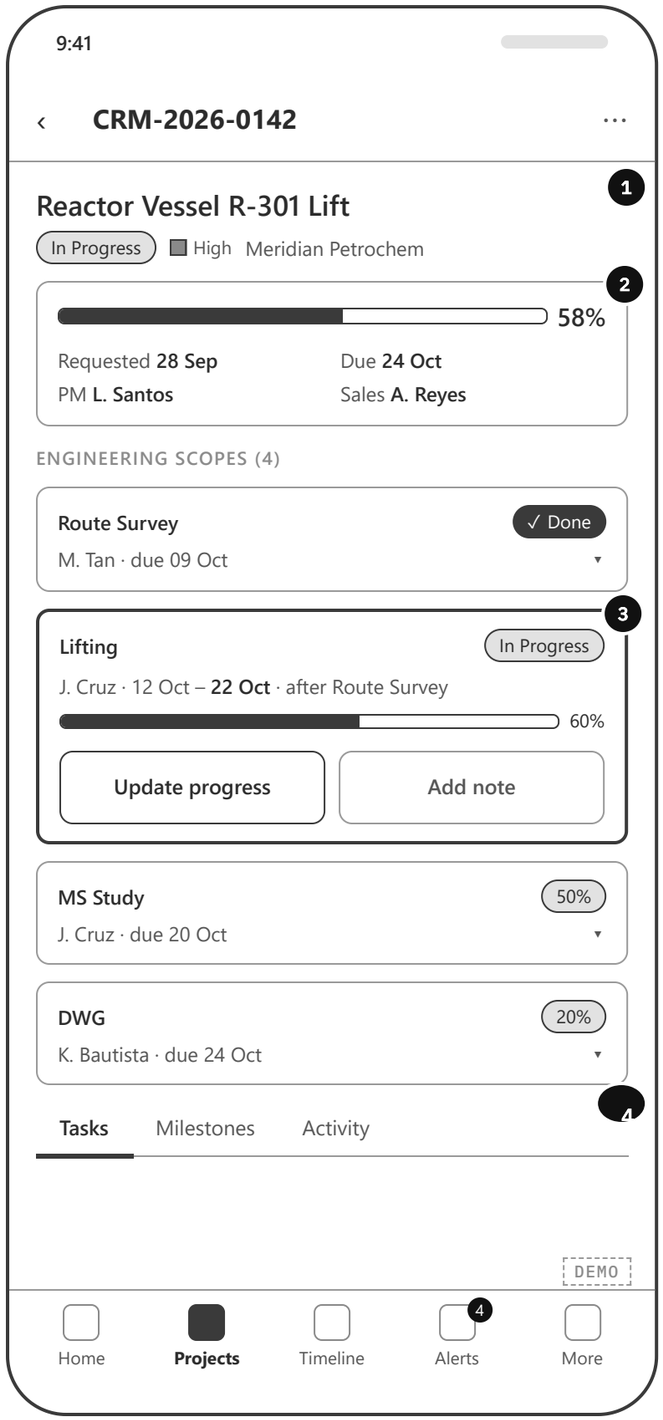

1. **Compact header** with logo, alert bell (unread count) and profile.
2. **Overdue alert** at the top whenever something is late.
3. **Key numbers** as large tap-able cards.
4. **Compact status chart** sized for a phone.
5. **Upcoming deadlines**, marked as project or scope. The bottom menu reaches every main area.

M2 Project List

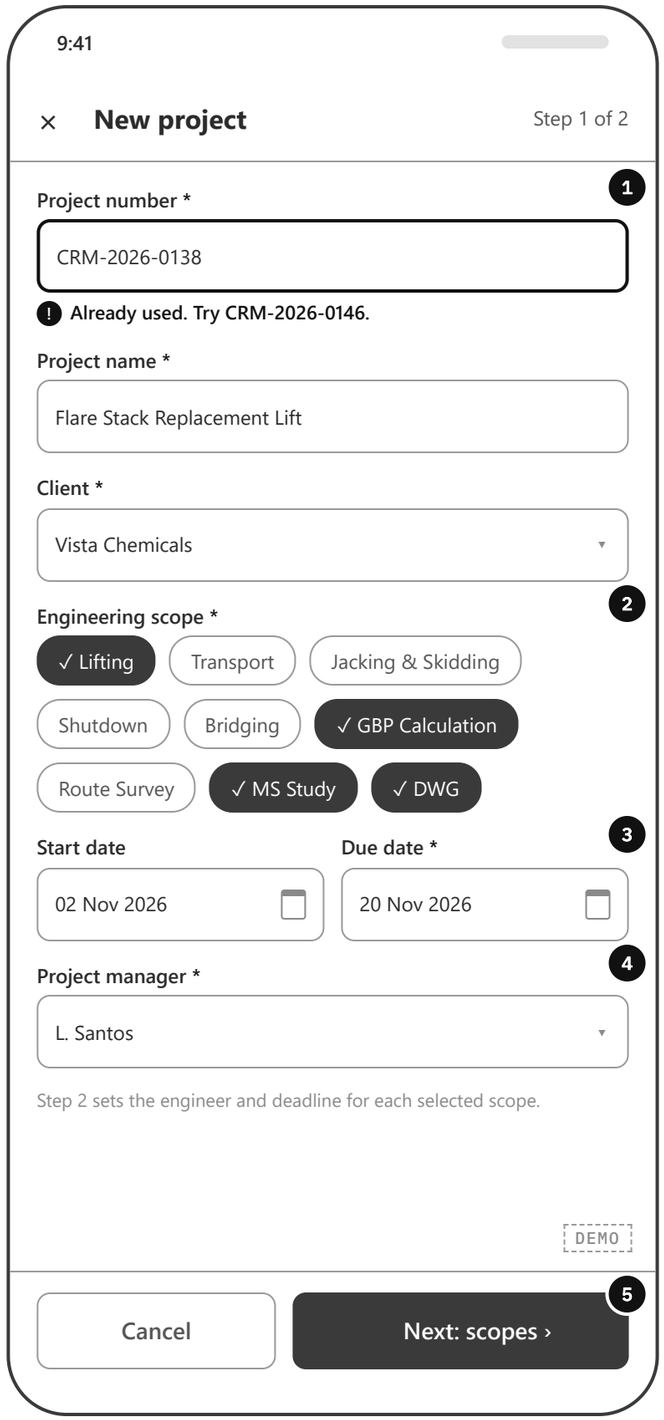

1. **Search** box sized for thumbs.
2. **Quick filters** (Open, Overdue, My projects) plus scope and status filters. The row scrolls sideways.
3. **Project cards** show number, name, client, scope summary, due date, status and progress. Overdue cards have a heavy border.
4. **Tap a card** to open the project (M3).

M3 Project Details

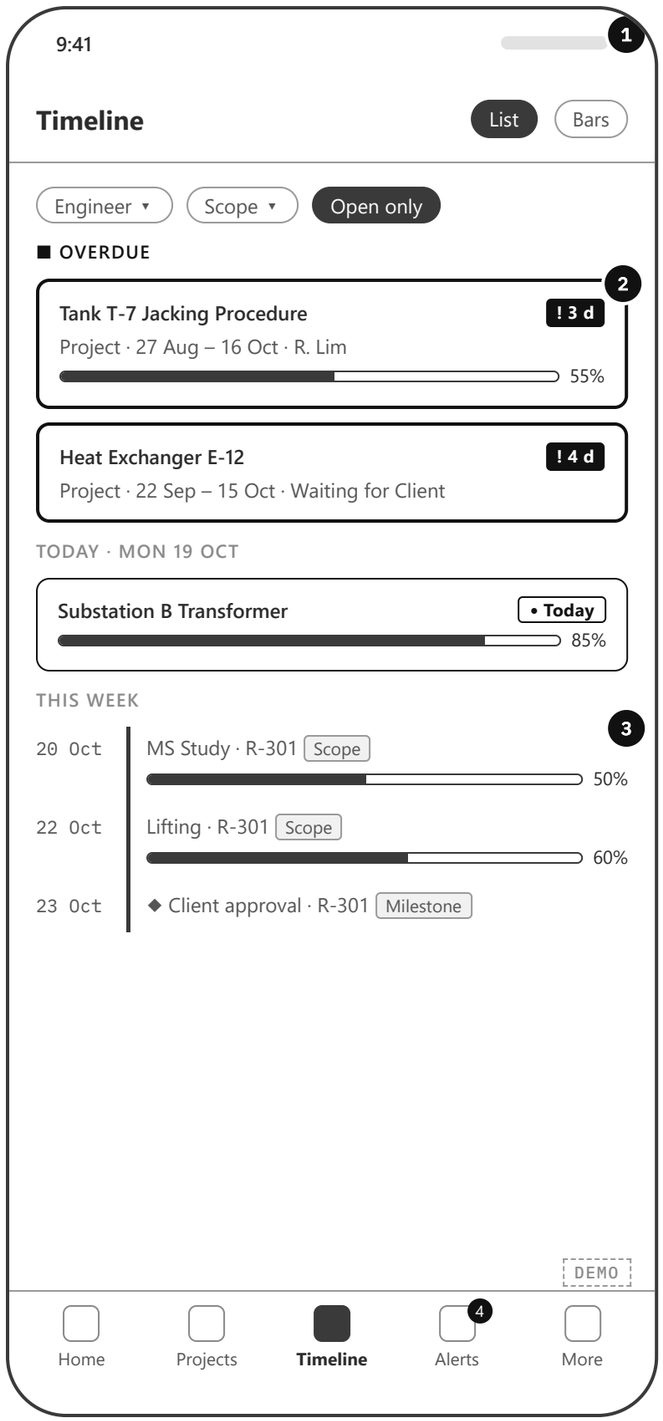

1. **Project header**: number, name, status, priority and client.
2. **Overall progress** with the key dates and people.
3. **Scope cards** expand on tap. An engineer can update progress or add a note to their scope from site.
4. **Tasks, milestones and activity history** below. Edit and the other actions are under the ··· menu.

M4 Create / Edit Project

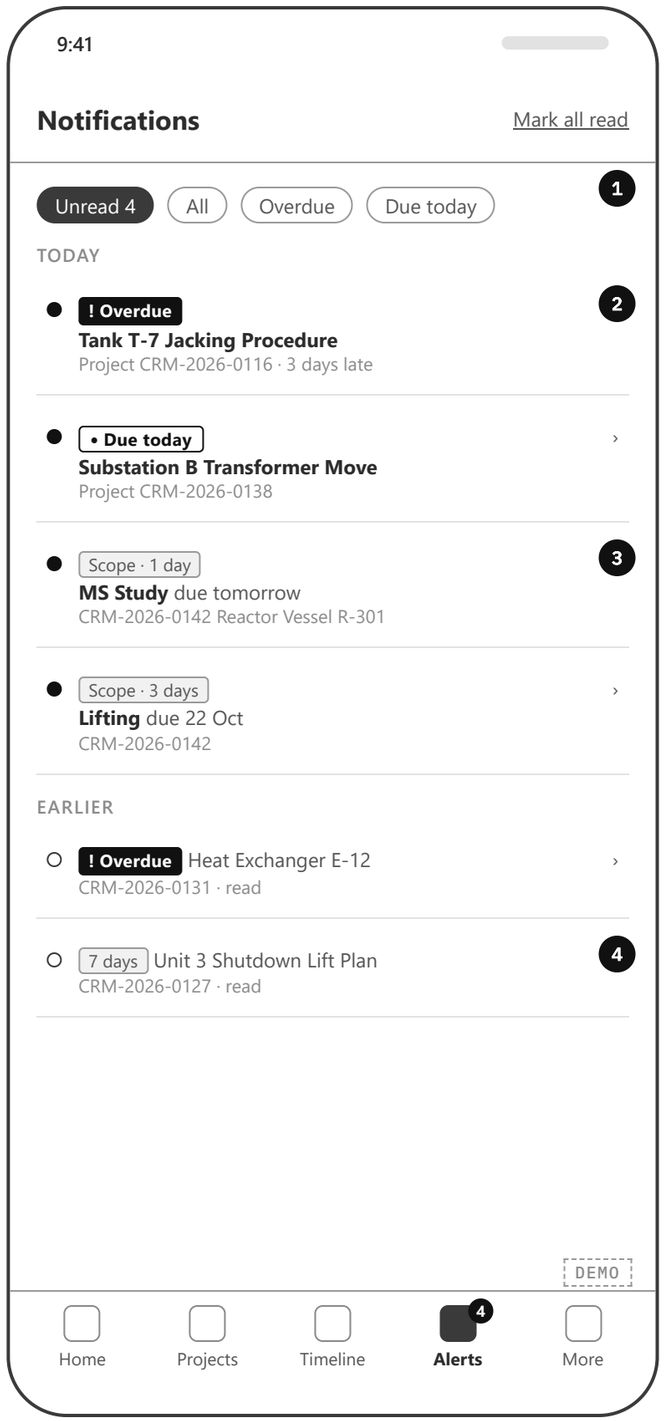

1. **Stacked fields** with the error message right under the field.
2. **Scope selection** as large tap chips. Several can be chosen.
3. **Date fields** open the phone's own date picker.
4. **Pickers** for client, salesperson, PM and engineers.
5. **Save and Cancel** stay pinned at the bottom. The form is split into two steps so it fits a phone.

M5 Timeline

1. **List view by default.** A simple scrollable bar view is available for those who want it.
2. **Overdue first**, with days late shown in black.
3. **Chronological list** of project deadlines, scope deadlines and milestones, each with progress. Tap any item to open the project.

M6 Notifications

1. **Filters** for unread, all, overdue and due today, plus Mark all read.
2. **Project-level alerts**: overdue and due today.
3. **Scope-level reminders** say which scope is due and when.
4. **Read items** lose the black dot. Tapping any alert opens the affected project and marks it as read.

How people move through the system

The main path from sign-in to a deadline alert, followed by the five everyday tasks.

Create a project

1. Tracker → **+ Add Project**
2. Fill project info, tick scopes, set dates
3. Set engineer and due date per scope
4. **Save** → project number checked → Project Details opens

Assign an engineer

1. Project Details → scope row → **⋯ Edit**
2. Pick engineer → Save
3. Engineer gets an in-app notice; change logged in history

Update progress (engineer, on phone)

1. Notification or Projects → open project
2. Tap own scope card → **Update progress**
3. Set % and status, add note or photo
4. Project progress recalculates; dashboard updates

Receive a deadline reminder

1. Server checks deadlines every day, even with nobody logged in
2. Sends 7 / 3 / 1-day, due-today or overdue alert (never twice)
3. Bell count rises; optional browser or email alert
4. Tap → project opens → alert marked read

Complete a project

1. All scopes reach 100% / Completed
2. PM sets project status to **Completed**
3. Actual completion date recorded; reminders stop
4. Project moves to Completed reports; archive later if wanted

Points to confirm

These decisions shape the next stage. A proposed answer is given for each. Please confirm or correct.

Q1 · Engineering scope list

Are these the nine scope types, with these names?

Lifting · Transport · Jacking & Skidding · Shutdown · Bridging · GBP Calculation · Route Survey · MS Study · DWG

> **Proposed:** administrators can add or rename scopes later.

Q2 · How overall progress is calculated

A project's progress needs one consistent rule.

> **Proposed:** simple average of its scopes (example above: 100, 60, 50, 20 → 58%). Alternatives: weight by scope duration, or let the PM override with a reason.

Q3 · Project number format

Do you have an existing numbering scheme to keep?

> **Proposed:** CRM-YYYY-NNNN, generated automatically and editable for imported projects. Duplicates are always blocked.

Q4 · Who receives reminders

Reminder steps are 7, 3 and 1 day before, on the day, and overdue.

> **Proposed:** the assigned engineer gets every step; the project manager gets 1-day, due-today and overdue; the salesperson only gets overdue. Email depends on a company mail account.

Q5 · Statuses

New Request, For Review, In Progress, On Hold, Waiting for Client, Waiting for Engineering, Completed, Cancelled.

> **Proposed:** use these for both projects and scopes. Is anything missing from your current workflow?

Q6 · Milestones

Shown as examples: Request Received, Engineering Review, Scope Confirmation, Calculation Completed, Drawing Completed, Client Approval, Project Completion.

> **Proposed:** a default milestone set added to each new project, editable per project. Please share your real steps.

Q7 · Who can see what

Roles: Administrator, Project Manager, Engineer, Salesperson.

> **Proposed:** engineers see projects they are assigned to; salespeople see their own clients' projects; PMs and admins see all.

Q8 · Existing data

Is there a current tracking sheet to import at launch?

> **Proposed:** a one-time import from Excel or CSV, if you can share the file layout.

All names, clients and projects are fictional sample data. Final look and wording to follow in the polished mockups.
